En instruktionsbog (Flight Manual) for F-8 Crusader. To be equally enjoyed by professional aviators and aviation buffs with limited technical knowledge, this biography brings to life the legendary aircraft that scored the highest kill ratio of any U.S. fighter aircraft in the Vietnam War. The book is filled with authentic re-creations of Crusader-MiG fights and vivid descriptions of the people and events that are part of the F-8 story, including John Glenn's 1957 record-breaking flight across the United States in three hours and twenty-three minutes. As the Navy's first supersonic aircraft, the Crusader holds an honored spot in carrier flying, and the author shows why it is called one of the most capable, versatile, and long-lived aircraft in naval aviation history. Barrett Tillman effectively combines an exciting account of the F-8's operational history with a detailed and authoritative explanation of its design, construction, and modifications. Tillman recalls the years of frustration and experimentation spent in refining the aircraft and its gunnery system, and then takes the reader through key actions in Vietnam where seasoned pilots handled their "rambunctious steeds" with scarcely a glance in the cockpit. Extensive appendixes provide further details. Filling a void in major works on legendary U.S. Naval carrier-based jet aircraft, this book is the definitive work on the design, development, flight testing, and initial service history of the Chance Vought F-8 Crusader. Having become the Navy's first fully-operational supersonic aircraft, the F-8 went on to a colorful career during the Cuban Missile Crisis and then in the Vietnam War as a potent MiG-killer. During that conflict, the Crusader distinguished itself as one of the most historically significant aircraft of the Cold War era. The 12 detailed chapters in this book thoroughly cover every aspect of the F-8's design and development, from earliest Navy BuAir specs through mock-up, prototype, flight test, and carrier qualifications. Lavishly illustrated with high-quality original factory photos and technical illustrations, this book provides a behind-the-scenes look at America's proud aerospace industry in its heyday, when a jet fighter that launched from, and recovered on, an aircraft carrier achieved routine supersonic performance in combat. The Vought F-8 Crusader, in all its

variants, remains to this day as one of the most successful military aircraft ever built. Detailed coverage of this aircraft's design and development, production, record flights, the XF8U-3 Super Crusader, significant NASA variants, and foreign operators augments the story of the F-8's development. In so doing, this book provides the vital "missing link" in the story of this legendary aircraft: the U.S. Navy's first supersonic jet fighter. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial} The modern lobster boat has evolved slowly over decades to become the craft it is today: seaworthy, strong, fast, and trusted implicitly by the lobstermen and women to get the job done and get them home, each and every time, through the most terrifying--and sometimes life-threatening--conditions that the sea can dish up. "Where do lobster boats come from?" "What is the origin of their design?" "Who builds them?" "How do they work?" The story of the Maine lobster boat needs to be told--before the storied history of this iconic American craft slips away forever into the past, on the heels of what may be the last surviving traditional lobster boat builders. Filled with colorful characters, old maritime tales, and fascinating details, this a definitive look at the origins and lore of Maine's most ubiquitous vessel. Revered by Naval Aviators as the 'last of the gunfighters' due to its quartet of Colt-Browning Mk 12 20 mm cannon, the F-8 Crusader enjoyed great success against VPAF MiG-17s during the Rolling Thunder campaign of 1966-68. But, the MiG-17's unequalled low-speed manoeuvrability, small size and powerful cannon armament meant that the American forces didn't have it all their own way. This fully illustrated book, featuring photographs, maps and battlescene artwork, reveals the tactics that were developed by pilots on both sides to give themselves the edge in air-to-air dogfights, allowing the reader to understand how the differing design and development doctrines played a part in combat. This autobiography covers my life and key experiences that I have had since my earliest recollections to the present time. The United States stopped nuclear testing in the atmosphere in 1962. As time has gone on, there are now few people still alive who have actually witnessed a large atmospheric nuclear explosion. I relate as one of my most memorable life experiences my witnessing of a nearly 8 million ton thermonuclear explosion at Christmas Island in 1962. An aspect of my career as a physicist in the weapons program that is essentially unique is that I was the responsible design physicist for 93 live underground nuclear experiments carried out at the Nevada Test Site. Obviously, the many activities that I have engaged in have been experienced by only a few. Interspersed with my rewarding career, I describe the adventures that I experienced while pursuing my hobbies of flying, boating, and traveling. The foundation for the great life that I have enjoyed is a happy marriage and a successful loving family. A lavishly illustrated celebration of two icons of the air, the Vought F-8 Crusader and A-7

Corsair II. Although the Crusader was built first and foremost as a Navy interceptor, as has often been the tradition with US fighters, a photo-reconnaissance variant was also produced by Vought. The photo-bird's first operational test came in the autumn of 1962 when its overflights of Cuba alerted the world to the likely presence of medium-range ballistic missiles on the Caribbean island. The recce Crusader's next action came during the long years of the Vietnam War. This volume is the second of two in the Combat Aircraft series devoted to the Crusader, the first title (again by Peter Mersky) having covered the F-8 fighter variants, and their MiG-killing exploits, during the Vietnam War.
