Criminal justice is unavoidably human. Detectives, witnesses, suspects and victims shape investigations; prosecutors, defense attorneys, and judges affect the outcome of adjudication. Simon shows how flawed investigations produce erroneous evidence and why well-meaning juries send innocent people to prison and set the guilty free. Volumes in Writing Spaces: Readings on Writing offer multiple

perspectives on a wide-range of topics about writing, much like the model made famous by Wendy Bishop's "The Subject Is . . ." series. In each chapter, authors present their unique views, insights, and strategies for writing by addressing the undergraduate reader directly. Drawing on their own experiences, these teachers-as-writers invite students to join in the larger conversation about developing nearly every aspect of craft of writing. Consequently, each essay functions as a standalone text that can easily complement other selected readings in writing or writing-intensive courses across the disciplines at any level. Topics in Volume 1 of the series include academic writing, how to interpret writing assignments, motives for writing, rhetorical analysis, revision, invention, writing centers, argumentation, narrative, reflective writing, Wikipedia, patchwriting, collaboration, and genres. This condition, chronic worry, is disruptive all by itself, and it can lead to other, more serious anxiety problems. This little book—the fifth in Harbinger's Ten Simple Solution series—offers a handful of easy and effective techniques for getting rid of worry once and for all. Draw

on powerful psychotherapeutic techniques, *10 Simple Solutions to Worry* is a succinct resource of cognitive-behavioral techniques for controlling worry and reducing stress. Exercises include self-assessments, motivation builders, relaxation training, and cognitive restructuring. After identifying and changing the negative thoughts that result in worry, you'll learn to replace worry behaviors with other, more positive and constructive activities.

How will two very different people find love—and survive impossible circumstances of war? In 1941 Rand Sterling was a well-known womanizing club owner and an American of note among ex-pats and locals alike. Now two years later, Rand is just another civilian prisoner of war—one whose planned escape from the Santo Tomas Internment Camp could put him and others in grave danger. Irene Reynolds grew up as a missionary kid in the Philippine jungle. Now she works for paranoid Japanese authorities, delivering censored messages to the other American prisoners in Santo Tomas. When Irene's negligence leads to Rand's failed escape attempt, Rand is sent to the torture chambers of Fort Santiago—and Irene suffers under the weight of guilt. Yet when she crosses paths with Rand again after his unexpected return to the camp, something more than mere survival draws the unlikely pair together. As life in Manila becomes more and more desperate, and another threatening letter finds its way from Irene's hands to Rand's, the reluctant couple struggles to find a way to survive . . . and to keep their growing feelings for each other from compromising the safety of everyone around them.

'This is a timely, challenging and fascinating book on a topic of central importance

the success or otherwise of our climate change policies. It sets a clear marker for what has to be done in the aviation sector.' Professor John Whitelegg, Stockholm Environment Institute, University of York, UK 'Climate Change and Aviation presents a clear picture of the transport sector's greatest challenge: how to reconcile aviation's immense popularity with its considerable environmental damage and dependence on liquid hydrocarbon energy sources. This book avoids wishful thinking and takes the much harder, but more productive, route of considering difficult solutions that clash with short-term and shortsighted expectations about the unlimited growth potential for flying.' Professor Anthony Perl, Urban Studies Program, Simon Fraser University, Canada 'A convincing and timely collection that brings together an impressive range of expertise. The book integrates various perspectives into a powerful core argument - we must do something and quickly, to tackle the impact of aviation on our environment. The authors recognise the political difficulties associated with promoting change but present constructive options for policy makers. Requires careful reading, especially for transport ministers set on promoting the growth of air travel.' Professor Jon Shaw, Director of the Centre for Sustainable Transport, University of Plymouth, UK Trends such as the massive growth in availability of air travel and air freight are among those which have led to aviation becoming one of the fastest growing emitters of greenhouse gases. These trends have also caused a shift in expectations of how we do business, where we go on holiday, and the food and goods we can buy. For these reasons aviation is (and is likely to stay) high up on global political, organizational and media agendas. This textbook is the first to attempt a comprehensive review of the sector, bringing together an international team of leading scientists. Starting with the science of the environmental issues, it moves on to cover the drivers and trends of growth, socio-economics and politics, as well as mitigation options, the result being a broad yet detailed examination of the field. This is essential reading for undergraduate and postgraduate students.

courses in transport, tourism, the environment, geography and beyond, while also being a valuable resource for professionals and policymakers seeking a clear understanding of this complex yet urgently pressing issue. The first book by the reclusive inventor of the world's most iconic puzzle THE RUBIK'S CUBE. Erno Rubik inspires us with what he's learned in a lifetime of creating, curiosity, and discovery. Erno Rubik was a child when he first became obsessed with puzzles of all kinds. "Puzzles," he writes, "bring out important qualities in each of us: concentration, curiosity, a sense of play, the eagerness to discover a solution." To Rubik puzzles aren't just games—they're creativity machines. He encourages us to embrace our inner curiosity and find the puzzles that surround us in our everyday lives. "If you are determined, you will solve them," he writes. Rubik's own puzzle, the Cube, went on to be solved by millions worldwide for over forty years, to become one of the bestselling toys of all time, and to be featured as a global symbol of intelligence and ingenuity. In Cubed, Rubik covers more than just his journey to inventing his eponymous cube. He makes a case for always being an amateur—something he has always considered himself to be. He discusses the inevitability of problem-solving during any act of invention. He reveals what it was like to experience the astonishing worldwide success of an object he made purely for his own play. And he offers what he thinks it means to be a true creator (hint: anyone can do it). Steeped in the wisdom and also the humility of a born inventor, Cubed offers a unique look at the imperfect science of creation. Principles of Internet Marketing: New Tools and Methods for Web Developers, International Edition helps readers understand the "why" behind the "how" of Web site development. You will learn the strategies used to drive traffic to a site, the tools that are available to keep

audiences coming back (with a focus on social media tools), and the role marketing plays in the building a successful Web site. A multi-disciplinary approach to transportation planning fundamentals

The Transportation Planning Handbook is a comprehensive, practice-oriented reference that presents the fundamental concepts of transportation planning alongside proven techniques. This new fourth edition is more strongly focused on serving the needs of all users, the role of safety in the planning process, and transportation planning in the context of societal concerns, including the development of more sustainable transportation solutions. The content structure has been redesigned with a new format that promotes a more functionally oriented multimodal approach to planning, design, and implementation, including guidance toward the latest tools and technology. The manual has been updated to reflect the latest changes to major transportation resources such as the HCM, MUTCD, HSM, and more, including the most current ADA accessibility regulations.
