Increasing numbers of ecologists and conservation biologists have begun to explore the use of drone technology to

obtain accurate and up-to-date data on the distribution and density of species, as well as the threats to their habitats, in their ongoing attempts to conserve and monitor biodiversity. Conservation drones are low-cost, autonomous, and operator-friendly unmanned aerial vehicles that can be used for surveying, mapping, and monitoring both habitat and biodiversity. They are fast becoming a valuable complement to ground-based surveys and satellite imagery for a wide range of ecological and conservation applications. The authors pioneered the use of conservation drones for the purpose of monitoring orangutan populations in Southeast Asia. They subsequently founded ConservationDrones.org to share their knowledge of building and using drones with colleagues in the wider environmental community. This website has proved highly popular and this book aims to further build capacity to use drones and inspire others to adapt emerging technologies for practical conservation. With its Four Thirds sensor, its 24–75mm focal range, and its Leica f/1.7–2.8 lens, the LX100 has received much high praise. In fact, DP Review awarded the camera its highest ever score in its camera class and called it “one of the best photographers’ cameras on the market and probably the best zoom compact ever made.” In addition, the inclusion of 4k video and 4k photo mode put the LX100 in a class by itself.
