Routledge is an imprint of Taylor & Francis, an informa company. During the past 13.7 billion years (or so) since the Big Bang, our universe has evolved, stars have formed and died and our planet congealed from the matter in space. In this title, the author reveals to us the extraordinary cosmic and evolutionary adventure of our own bodies. Where is God in the universe if anywhere? Why did God make germs? Why should we be so special? Could the universe have been different? This is a book that brings home, in no uncertain fashion, the

discrepancy between the universe envisaged by the ancient sages and prophets and that of modern scientific cosmology, where the possibility of divine intervention looks less and less likely. Butchins demonstrates with clarity how the scientific method may be used, despite certain drawbacks, in an attempt to verify objective truth. It describes how the effect of the Copernican Revolution in the seventeenth century has steadily undermined the basic structure of the three great monotheistic religions of our day, Judaism, Christianity, and Islam, especially with respect to their eschatological concepts. The Eastern religions, being less anthropomorphic, are less affected. The theistic argument from design is shown to be powerful enough to have caused disagreement among present-day scientists, in spite of the strictures of Professor Dawkins. In general, the book attempts to make some sense of the structure of the universe in terms of our own consciousness; it behoves the reader to consider that.

Somewhere in Cornwall, the photogenic bolthole at the western extremity of Britain, a couple of Indian ex-pats take to the coastal paths to explore a land as old as the hills. When author Arundhati Basu crosses the River Tamar with her husband in the summer of 2012, little does she know that they are stepping into a different world order. Vanity and pretensions are useless commodities in the old country where everything comes to a screeching halt for a cream tea or a well-earned box of fish & chips. The couple, newly married and relocated to the Midlands, find the contours of their relationship changing with every tramping holiday in Cornwall, as they get immersed in the relaxed rhythm of the countryside. Overarching their experience is the salt-laden air from the sea, washing over the senses and reminding us that we are at the mercy of nature. In a world caught up wholly in the bog of social isolation, a narrative of slow travels through the West Country is a reminder that somewhere on the horizon a place like Cornwall awaits. Told in a 'loiterly' fashion, along with illustrations by the author in charcoal, the book is an anti-travel guide, a cure if you will for the anaesthetic impact of a city existence, far from the lightning-fast pace of modernity. This book is intended as an elementary introduction to differential manifolds. The authors concentrate on the intuitive geometric aspects and explain not only the basic properties but also teach how to do the basic geometrical constructions. An integral part of the work are the many diagrams which illustrate the proofs. The text is liberally supplied with exercises and will be welcomed by students with some basic knowledge of analysis and topology. This newly updated and expanded volume contains detailed, thorough and accurate information on MS-DOS written for advanced-level programmers of all environments. Contains an index and appendixes. This book discusses the international legal issues underlying Internet Governance and proposes an international solution to its problems. The book encompasses a wide spectrum of current debate surrounding the governance of the internet and focuses on the areas and issues which urgently require attention from the international community in order to sustain the proper functioning of the global network that forms the foundation of our information fuelled society. Among the topics discussed are international copyright protection, state responsibility for cyber-attacks (cyberterrorism), and international on-line privacy protection. Taking a comparative approach by examining how different jurisdictions such as the United States, the European Union, China and Singapore have attempted various solutions to the problem of Internet Governance, the author offers a practical solution to the problem and is a proponent of International Internet Law. Kulesza suggests that just as in the case of International Environmental Law, an Internet Framework Convention could shape the starting point for international cooperation and lead to a clear, contractual division of state jurisdictional competences. International Internet Law is of particular interest to legal scholars engaged with the current challenges in international law and international relations, as well as students

of law, international relations and political science. The issues discussed in the book are also relevant to journalists and other media professionals, facing the challenges of analyzing current international developments in cyberspace.
